

How to install opencv2

1. Log on to your Raspberry Pi.

2. Open a terminal window on the Pi.

3. Make sure that the Raspberry Pi is updated:

```
sudo apt-get update
```

```
sudo apt-get upgrade
```

4. These commands install the prerequisites for building OpenCV. Because we are doing this on a fresh installation of Raspberry Pi OS, it is likely some of these may already be installed and using the most recent version:

```
sudo apt-get install build-essential git cmake pkg-config
```

```
sudo apt-get install libjpeg-dev libtiff5-dev libjasper-dev libpng12-dev
```

```
sudo apt-get install libavcodec-dev libavformat-dev libswscale-dev libv4l-dev
```

```
sudo apt-get install libxvidcore-dev libx264-dev
```

```
sudo apt-get install libfontconfig1-dev libcairo2-dev
```

```
sudo apt-get install libgdk-pixbuf2.0-dev libpango1.0-dev
```

```
sudo apt-get install libgtk2.0-dev
```

```
sudo apt-get install libatlas-base-dev gfortran
```

```
sudo apt-get install libhdf5-dev libhdf5-serial-dev libhdf5-103
```

```
sudo apt-get install libqtgui4 libqtwebkit4 libqt4-test python3-pyqt5
```

5. pip3 install -U numpy

6. sudo pip3 install opencv-python

7. python

8. import cv2

9. cv2.__version__
